

These queries will help retrieve and analyze data related to **drivers, licenses, exams, and branches**.

1 Write a query to find people who have taken more than one learner exam and count their total exams.

2 Write a query to get the list of branches where people have taken exams, including branch names and locations.

3 Write a query to find people who took their driving exam at "Downtown Licensing" and their results.

4 Write a query to find the branch that has conducted the most exams, showing branch name and total exams.

5 Write a query to find people who have a driver's license and completed driver education.

6 Write a query to count how many people took the learner exam on each date.

7 Write a query to show people who have taken both a learner and a driver exam.

8 Write a query to count how many licenses have been issued by type (learner or driver).
